Work Completed

Studied the BlurGuard problem domain, discussed the proposed solution, and identified the major users, actors, system modules, and overall workflow for real-time detection and censoring of sensitive information during screen sharing.

Prepared the initial project plan covering the problem statement, proposed solution, major modules, technology stack, project scope, software engineering diagrams, development stages, testing requirements, and future scope.

Outcome

The initial project scope, major functionalities, system workflow, and development milestones of BlurGuard were defined.

Next Planned Work

Complete Requirements Engineering and define the functional and non-functional requirements of the BlurGuard system.
