Work Completed

This week we worked on doing detailed analysis of what problem we will solve, what technologies we will use to solve them, like using OCR for text reading and analyzing text data.

We did research on how we can make this unique and handle data better . We decided to add context analysis and risk score using confidence score so that we can decide better if that data actually needs masking.

We also decided to add user personalization policy system for masking of data as different users have different value or importance to certain types of data.

Outcome

The design and strategy phase of the project was completed where we decided about how our project will actually work.

Next Planned Work

To divide the project into various modules and finalize them and actors list to develop various UML diagrams and proceed with actual development.
